OVERVIEW

Modern inkjet printers are amazingly powerful. Something that is possibly even more amazing is the low price you can now purchase these printers for.

But if you weren't born yesterday, you probably realize by now that inkjet cartridges are ridiculously expensive. In fact printer manufacturers will actually sell you the printer at a loss just so that they can then sell you ink cartridges at over

inflated prices. They make a huge amount of profit on these ink cartridge replacements, which is why they spend so much time and money trying to convince you to buy their ink cartridges

But Now, you don't have to feel bad printing thousands of pages and digital pictures any

longer. With our new Continuous Ink Supply System(CISS), the expensive days of buying inks is over

With our latest generation Smart Auto Reset Chips, INK-novation CISS can lower down the amazing accumulation of wasted ink. With our NON-SPONGE and NON-DRILLED-HOLE, our CIS is the most efficient way to convert your printer into a non-stop continuously printing monster!
